

Zetron Command Mobility Solutions

Command & Control on the Go

At times, communications have to be monitored, made, and even managed from outside the confines of the multi-screen stationary operator consoles in the communications room. Since the room can't move, mission critical operations require nimble tools that enable them to answer the call and direct subsequent traffic, response, activities, etc., from disparate locations. For this reason, Zetron provides mobility solutions that offer users the same advanced capabilities they're accustomed to having in MAX Systems while at their full time console position.

MAX Systems Laptop Bundles

While laptop monitors, keyboards, speakers, and microphones generally aren't the ergonomic ideal for full time use, they can provide a temporary and/or supplemental means for maintaining operations as needed. So laptop bundles are available for MAX Call Taking, MAX Dispatch, and MAX CAD that all provide the full capabilities of the respective MAX solutions, without being bound to an immobile workstation.

CommandIQ

CommandIQ is an innovative portable workstation designed for robust functionality in a compact unit that's easy to store, transport, and quickly activate to provide a fully operational dispatch station from anywhere connectivity is available. The traditional audio handset combined with sleek touch screen operation gives CommandIQ the perfect mix of capability and mobility for temporary applications where traditional or permanent operator workstations aren't convenient, practical, or necessary. CommandIQ delivers all the functionality of a typical dispatch workstation in a highly durable, portable, and user friendly package.

Common Mobile Command Use Cases

There are countless diverse applications for Zetron's Command & Control Mobility solutions within public safety, utilities, transportation, healthcare, higher education and other organizations where maintaining reliable and "always on" communications is crucial. Following are just a few examples of where they're being used by Zetron customers today:

- **Admin/Supervisor Positions** – Whether adjacent to full time operator positions or in an office across the hall, the ability to monitor and if necessary engage in incident response or handling without being at a full console is important to center operations management.
- **Emergency Operations Centers (EOC)** – When portability, a compact footprint, and quick set-up are vital to managing and delivering remote communications, mobile command solutions are vital to maintaining field operations in rugged and/or diverse environments.
- **Special Events** – On-site communications stations are often required when operating large events to manage cross-functional and multi-organizational personnel across large venues.
- **Remote Back-up Locations** – Redundancy is a business continuity necessity for disaster preparedness, but limited space and budget often don't make it practical to equip back-up facilities similarly to the primary communications center, so mobile command consoles are an ideal solution.
- **Mobile Command Centers** – For events better managed in the field, more lightweight, transportable, and durable equipment than what's used in the communications center enables teams to be where the action while staying connected.

Zetron's Command & Control Mobility solutions enable organizations to maintain mission critical communications regardless of where those communications require their resources to be. Find out more about Zetron solutions at www.zetron.com.
