At-A-Glance:

MAX Fire Station Alerting

Automate the alert. Accelerate the response.

Fire and emergency services teams need alerting workflows that move quickly, reduce manual steps, and keep dispatch, stations, and responders aligned.

MAX Fire Station Alerting connects CAD, dispatch, station controls and audio paths in a purpose-built workflow designed to help emergency personnel respond faster and arrive better prepared with greater certainty.

Built for faster, smarter station response—from alert to action

Accelerate station alerting
Support simultaneous multi-station alerting and automated CAD-triggered activation to reduce response delays and help ensure the right stations, units, and responders are notified immediately.

Strengthen dispatch-to-station communication
Deliver critical information through live voice, tones, PA, radio, and optional two-way audio, helping responders understand the situation before they leave the station.

Automate station readiness
Automate lighting, doors, appliances, alarms, and other station actions through remote Aux I/O controls, transforming manual processes into consistent, response-ready workflows and protocols.

Enable resilient operations
Built-in redundancy, dual network connections, and hot standby capabilities help keep alerting operations running during hardware failures, network disruptions, and emergency events.

Connect dispatch, station systems and communications

ALERTING AND COMMUNICATIONS

- CAD API integration
- Simultaneous multi-station alerting
- VoIP and radio-based communications
- Configurable visual, audio, and station-control alerts

AUTOMATION AND OPERATIONAL AWARENESS

- Remote Aux I/O station controls
- Station lighting, doors, appliances, and sensor inputs
- Real-time apparatus status monitoring
- Intuitive touch control console
- Multiple levels of system redundancy
- Radio integration with MAX Dispatch and supported interfaces

Your Zetron. Your Way.

Zetron delivers an end-to-end platform spanning call handling, CAD, dispatch and alerting, giving agencies the flexibility to choose solutions, deployment models, and investment paths that fit your environment today and evolve with you tomorrow.
