

MAX Dispatch

Keep dispatch connected when operations get complicated

Public safety agencies need dispatch environments that can flex across routine operations, major incidents, staffing constraints, remote sites, and multi-agency response.

MAX Dispatch brings radio, resources, and incident communications into a streamlined console experience built for interoperability, resilience, and operational flexibility.

Built for modern dispatch continuity and control

→ Simplify the dispatcher experience

A streamlined, configurable interface helps reduce screen clutter, streamline operations, and improve training so dispatchers can focus on incidents in moments that matter most.

→ Maintain operational continuity

Built-in redundancy, resource sharing across locations, and laptop-based dispatch capabilities help agencies maintain operations during outages, emergencies, facility disruptions and planned transitions.

→ Adapt as operations evolve

Add channels, consoles, locations, and new capabilities through scalable architecture and remote configuration—without a large-scale system overhaul.

→ Connect across systems and jurisdictions

Radio interoperability helps agencies coordinate communications across departments, manufacturers, radio interfaces, and geographic regions.

Reliable, resilient dispatch anywhere

Unify dispatch operations, radio communications, resource sharing, and continuity planning in a flexible platform built for mission critical environments.

OPERATIONS AND CONTROL

- Streamlined, configurable user interface
- Interoperability with major radio interfaces and manufacturers
- Remote configuration and maintenance
- Modern IP-based architecture

RESILIENCE AND SCALE

- Network redundancy across every endpoint
- Geo-diverse resource sharing and backup
- Laptop-based dispatch for remote, temporary, backup, or mobile operations
- Expansion for channels and console positions

Your Zetron. Your Way.

Zetron delivers an end-to-end platform spanning call handling, CAD, dispatch and alerting, giving agencies the flexibility to choose solutions, deployment models, and investment paths that fit your environment today and evolve with you tomorrow.
